Features:

View on mobile devices

Adopts HTML5 technology, can be viewed both live and VOD from mobile device.

Management and allocation of device resources

Manage REACH recording and streaming devices in a centralized manner. It supports the configuration, operation, and maintenance of the device and allocate device resources by classrooms. In addition, it supports the manual control of recording and the configuration of schedule recording.

User management

Manage all kinds of users in the organization, including teachers, students, administrators, and IT personnel. This function assigns different system privileges to different users and supports data synchronization among Lightweight Directory Access Protocol (LDAP) users.

File management and release

Manages files by categories>albums, and assigns different access rights to different user group. This function enables users to release files to the platform of the media center and to learning management systems such as BlackBoard. In addition, the files are accessible from windows PC, MAC computer, and mobile devices.

Portal function

Provide users with a portal page, allowing users to access their own resources through a unified interface. The portal page supports the content management system (CMS) so that schools can customize the portal page as needed.

Workflow management

Supports scheduled recording, immediate recording or one button to start recording, and different file release modes (auto release or release after the verification of the Course Manager). The workflow is simple and adjustable as needed.

Integration with the LMS/CMS

Supports LDAP, and can be integrated with E-Learning system, such as BlackBoard.

Customized mobile device interface

Customized self-adapting mobile device access interface, it is more concise and easier for user to view live streaming and VOD files.
